As the country continues to open up and return to work, DKI/G2 are at the forefront of assisting our clients with their site-specific needs. We have continued to move in a direction that works to assure we are as informed and up-to-date as possible on the topic, treatment methods, sampling, and governmental updates. We are participating in studies while continuing to identify latest best remediation/treatment practices. Along with monitoring the CDC, EPA, and OSHA guidelines, we are also working with our DKI ProSupply partners on new technologies, the assessment of inventory, cost, and product efficacies.

DKI/G2 provide both a national network of highly qualified mitigation/remediation companies AND a team of highly skilled Certified Industrial Hygienists and Certified Safety Professionals under one roof. This collection of teams provides our clients with a holistic approach to meet their specific needs.

We are sure your aware; OSHA has produced and publicized their return to work guidelines for business owners and operators. These guidelines are clearly stating the position they expect business owners and operators to take in providing a safe work environment for the employees or occupants of their facilities. DKI/G2 can help navigate the needs and dynamics of building owners, property managers, and lessees. Our goal is to assist our clients in helping you navigate the process of meeting these guidelines, answering questions and concerns from employees or customers, and developing an ongoing plan that meets the needs while being conscious of the cost Implications.

Our team at DKI/G2 can provide a customized full-service response, from mitigation to industrial hygiene testing / planning and safety response program development, that is designed to keep employees and customers safe and healthy.

This all starts with the development of a solid plan, tailored to meet your specific business needs.

**VIRUS**

# COVID-19 INDUSTRIAL HYGIENE AND HEALTH & SAFETY SERVICES

G2's programs and services will enable businesses to resume operations safely and navigate any future disruptions to business operations.

## **BUILDING OR FACILITY START-UP SERVICES - GET BACK TO WORK SAFELY**

When commercial spaces are empty for prolonged periods, servicing of critical systems is often paused or neglected. If proper precautions aren't taken, this can cause unforeseen health issues for employees.

### **Some potential problems in unoccupied facilities include:**

- Extra condensation or humidity
- Burst pipes
- Sewage problems
- The presence of mold growth or legionella

G2's consultative services provide a thorough inspection of all building systems along with a report of any potential risks to employee health. This comprehensive report also includes recommendations for how to quickly address issues with industry best practices.

## COVID-19 SAMPLING AND TESTING

### **START WITH A CLEAN SLATE**

G2 is now able to sample and test for the presence of the SARS-CoV-2 virus that causes the disease COVID-19. This breakthrough offering can now provide assurance that select surfaces are reasonably free from the SARS-CoV-2 virus. The test involves sampling and assessing "high-traffic" touchpoints in your facility: faucet handles, doorknobs, keyboards, and other surfaces that are frequently touched.

### **ADVANTAGES:**

- Results will be available within days of testing
- Assessment and sampling protocols have been developed by Certified Industrial Hygienists
- The laboratory assessing the sample utilizes FDA-approved methods

### **Beyond this initial test, G2 can also provide professional cleaning assistance, helping to:**

- Develop cleaning protocols specifically for each facility
- Identify qualified cleaning companies
- Provide oversight to ensure cleaning protocols are being followed
- Perform verification sampling to ensure cleaning was done appropriately

### **EMPLOYEE SAFETY PROGRAMS - EQUIP EMPLOYEES WITH SAFETY BEST PRACTICES.**

Training employees in critical safety practices and processes enables them to keep themselves and others safe.

### **G2 offers training programs that can educate employees on key safety practices and the proper use of equipment to give your workforce the tools they need to maximize safety in the workplace.**

These programs include:

- Respiratory protection, fit-testing and training
- Prevention planning and training to address safe workplace behavior
- Training on the proper use of personal protective equipment (PPE)
- Bloodborne Pathogen Plans and training
- Hazard Communication (HAZCOM)

Each program can be tailored to fit any organization's level of need and depth of training.

### **Risk Management Planning - Prepare your company and workforce for the future.**

When incidents arise, the most important step in safeguarding employees' health and safety is knowledge of proper procedures and protocols to mitigate hazards and exposure risks.

G2 offers consultation and support for developing protocols in the following risk management categories:

- Organizational contingency planning and strategy
- Pandemic and emergency preparedness planning

# COVID-19 CLEANING/TREATMENT SERVICES

## LEVELS OF CLEANING/TREATMENT SERVICE

Many of our National Clients are aware of the virus pattern, and we are mitigating the risk of exposure and addressing the potential concern for that particular moment in time. It is challenging to react to each claim of an affected, or assumed to be affected, person entering the business. For this reason, we have developed and presented a two-level approach to the request for service.

### LEVEL ONE:

- Establishing containment of the area, if needed, to prevent cross contamination
- Manually clean all horizontal and vertical surfaces up to 8-10' height using EPA registered disinfectant
- Steam cleaning all carpets and flooring. (optional per customer request)
- Steam cleaning all upholstery. (optional per customer request)

### LEVEL TWO:

- Level One protocol.
- Use of HEPA Filtration and properly placed air scrubbers is recommended.
- Use of misting/ fogging system with appropriate EPA approved solutions, designed to aggressively deactivate any cells that may be remaining anywhere on surfaces and in the air.

## PRODUCTS AND EQUIPMENT

The EPA is steadily updating the list of approved and registered disinfectants known to have efficacy on the target contagion. The CDC makes adjustments to recommendations in response to new studies and information for reducing spread. OSHA issues guidelines for maintaining safety in the ever-changing work environments. DKI/G2 is in constant review of all government recommendations and guidelines as well as participating in independent analysis to determine the best products and equipment for use in the process. Our vendor supply division, DKI ProSupply, is also performing regular assessments of inventory, supply chain movement, and new product availability. For maintaining an ongoing healthy environment, and to assist you in meeting the new OSHA guidelines, ask us about our indoor *Air Quality Enhancement Technologies*.

## 24-HOUR EMERGENCY SERVICES

DKI/G2 is on call to respond with emergency restoration services, industrial hygiene, safety and risk management, as well as indoor environmental services. Any time of day or night, all calls are answered by a dedicated DKI/G2 team member. We will then schedule and dispatch a work crew that has experience in dealing with commercial properties of all sizes.

For over four decades, DKI/G2 has been successfully restoring damaged commercial properties in North America. Our Emergency Response Teams are available 24 HOURS A DAY, 7 DAYS A WEEK -- with fleets of vehicles and equipment, including but not limited to, service trucks, semi-tractor/trailers and mobile command centers. Vehicles are fully stocked and ready for immediate dispatch.

All of these services combine to provide our clients with the fastest possible response including our Rapid Response guarantee, when you need us the most. DKI/G2's proven track record has made it North America's leading restoration and Industrial Hygiene contractor for retail stores, malls, universities, worship centers, hotels, multi-family housing properties, financial institutions, manufacturing & industrial plants, healthcare facilities, government buildings, hospitality & resort facilities.
